

FOR IMMEDIATE RELEASE

February 2008

**Wizz Communications expands the availability of its
Microwave Ethernet access services.**

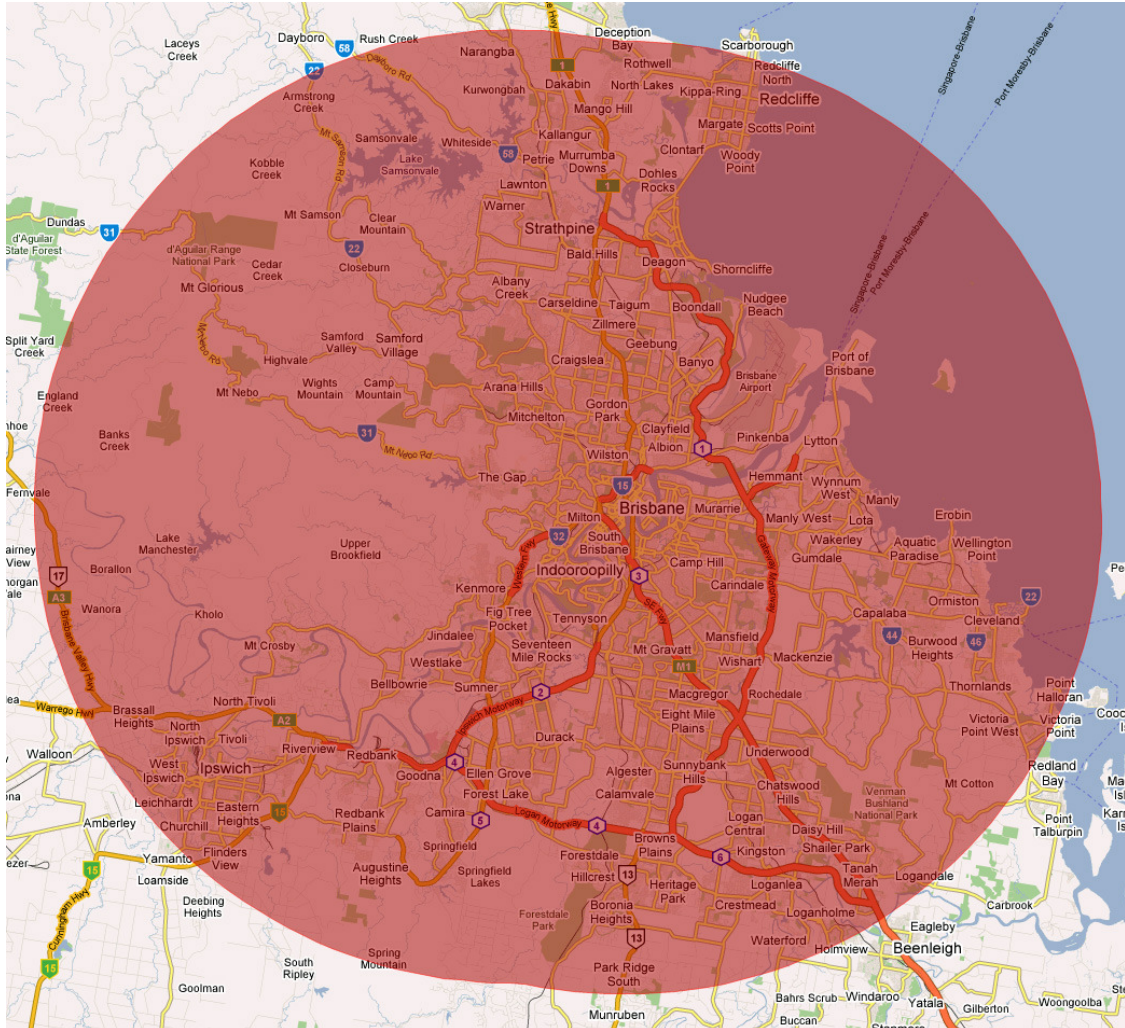

Wizz Communications, the wholesale provider of Microwave Ethernet access has announced today expansion in the geographical availability of services in the Brisbane area.

'Our wholesale partners have been demanding greater coverage from us for some time now and we are delighted that we can deliver what we have been asked for. The Brisbane area has excellent potential and we are certain additional coverage will allow our partners to meet the needs of more business customers.' Says Andrew Maclaren, Director of Wizz Communications.

This expansion of the network not only increases Wizz's physical coverage in the Brisbane Metropolitan district. Significantly the potential for line of sight has been increased greatly across the whole coverage area. Due to the elevation of the new transmission site a great number of businesses will now be able to access the high quality high speed bandwidth they are demanding for their connectivity.

Sales & Marketing Manager for Wizz Communications, Ellis Spooner, comments – 'Wizz, quickly and cost effectively deploys Ethernet access services up to 1Gbps with very high service levels that match fibre; our wholesale channel tells us that the opportunity they have to deliver these types of service is significant. Expansion in our coverage means that Wizz's wholesale partners can now offer high speed and high quality bandwidth in areas where business users have long been lacking this level of connectivity. It doesn't stop here either, we will continue expanding the Wizz network coverage in the Brisbane, Sydney and Melbourne areas. We have a very busy schedule for the rest of the year.'

Wizz Communications extended Brisbane coverage area is shown below.
