FOR IMMEDIATE RELEASE

Wizz Communications experiences 126% jump in profitability
Carrier reports positive operating cash flow

Wizz Communications, an Australian Communications and Media Authority licensed wireless carrier, has experienced a 126 per cent jump in revenues for the last six months of FY 2006 compared to the first half period.

A further 43 per cent increase in revenue for the month of July 2006 over the previous month has seen the fledgling carrier report its first month of positive operating cash flow.

Wizz has recently added a number of new wholesale partners actively representing Wizz's services in the market place. New partners include SecureTelecom, Intrapower and Chilli Internet Solutions.

Wizz Director, Andrew Maclaren, outlines, "The positive results that we are experiencing are testimony to the strength of our business model. Wizz is building a solid reputation as a supplier of quality last mile access to the wholesale Telecommunications marketplace. Our key differentiators include our flexibility, reliability, and ability to deliver services rapidly. I believe that the support and loyalty that we are attracting from our existing and new wholesale partners is directly attributable to the ease of doing business with us. I do not think that there are many Telco carriers in the market place who could honestly say that they are easy to work with. Combine this with a well structured engagement model, scaleable and focused wholesale only approach, an unbeatable value proposition, and the future is looking very positive for us and our partners."
